Case Studies

Classic networks

LeNet - 5

60k parameters

$n_H, n_W \downarrow, n_C \uparrow$

Conv pool Conv pool fc fc output.

Advanced: Sigmoid/tanh

ReLU

$$n_H \times n_W \times \frac{n_C}{f \times f \times n_C}$$

AlexNet

— Similarity to LeNet, but much bigger ~60 M parameters.

— ReLU

— Multiple GPUs

— Local Response Normalization (LRN)

VGG - 16 — 16 layers with weight.

CONV = 3×3 filter, $S=1$, Same MAX-POOL = 2×2 , $S=2$

VGG-19 Even bigger.

$224 \times 224 \times 3$

$\sim 138 \text{ M}$
